Core Idea and Zones

Ghostboard is a conceptual keyboard layout offering a secure input mode.

The keyboard is divided into zones:

- Numeric Zone (0–9 + symbols)
- Alphabet Zone (a–z)

It is usable on touch devices and mouse-based systems.

How Secure Mode Works

Secure mode must be manually activated.

- Pro Mode: All keys in the zone reshuffle after each press.
- Simple Mode: Pressed key swaps with a random key in the zone.

Future Enhancements

- Security fonts to counter AI
- Emoji-based digits like 1=1, 2=2, etc.
- Confusion mode with distractions
- 5 language layouts
- One-button mode switch
- Mouse-compatible UI
- Visual customization
- Licensing options for enterprise/banking use

Threat Protection

- Keyloggers: Useless logs due to dynamic layout
- Screen Recording: Visual unpredictability
- AI Touch Tracking: No patterns to learn
